

PUTTING YOUR SAFETY FIRST!

At Dual Inventive your safety is our main priority, and that is why all of our rail safety products are rated to the highest Safety Integrity Level – SIL 4

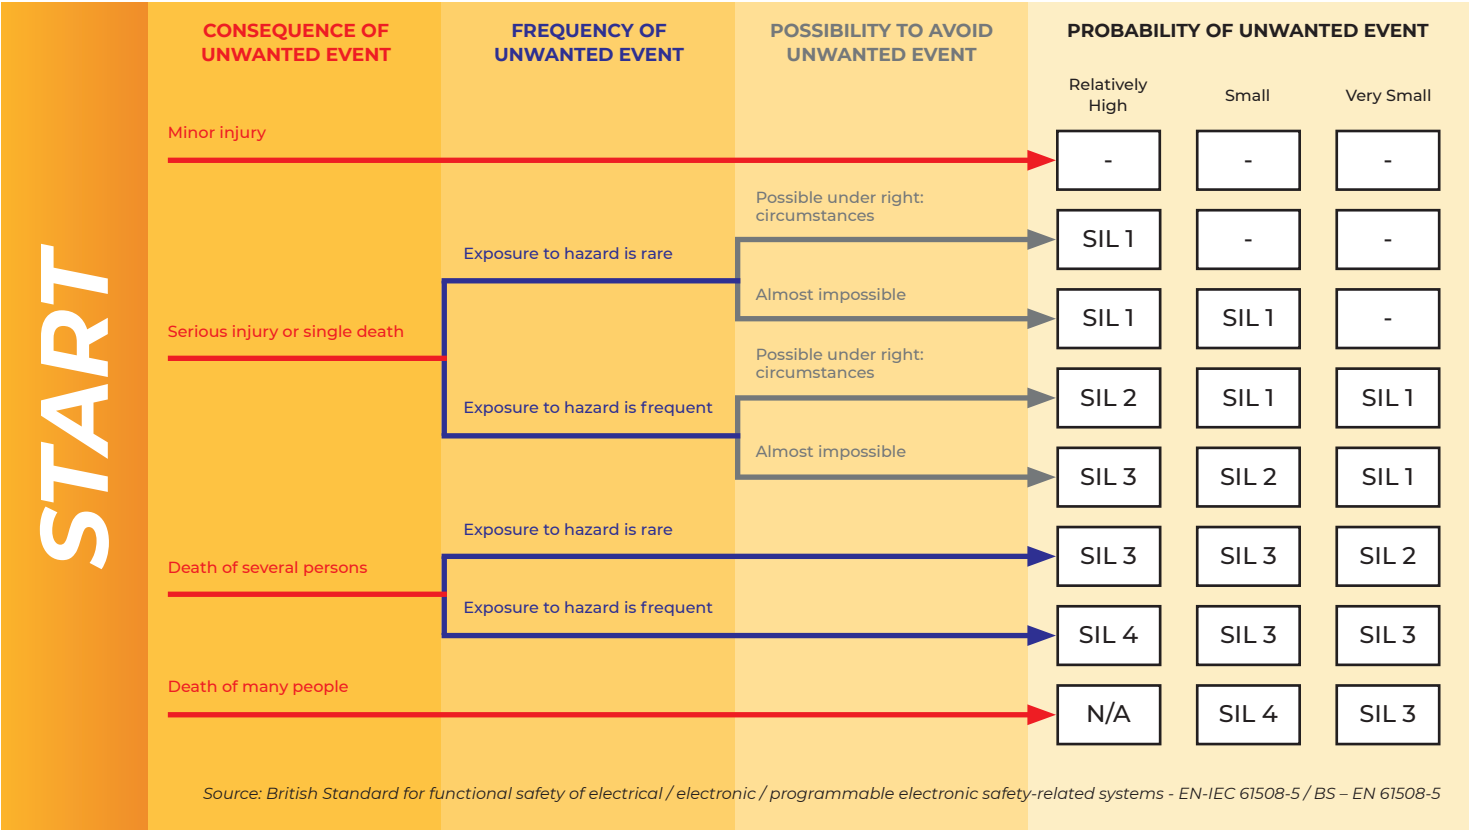

WHAT DOES SIL MEAN?

A SIL is a measure of the system's safety reliability, as well as its performance to maintain and achieve safety at the highest level.

The greater the risk, the stricter the safety requirements are needed for deployment.

SIL 4 demands the highest levels of integrity to make sure the correct safety measures are in place to protect track workers.

Refer to the flow diagram below to determine which Safety Integrity Level track workers should work with to reduce the risk of accidents and / or fatalities.
